

From raw data to information to knowledge to discovery – INCOGEN's GenePort™ discovery platform combines a powerful, portal-driven backbone with sophisticated and user-friendly data mining and management tools to provide researchers with an effective framework for turning raw data into discovery.

GenePort™ manages and correlates data types including sequences, annotations, expression data, and literature search results and presents the information in a clear and intuitive style allowing users to efficiently navigate and mine their data.

Visit www.incogen.com for additional information and an interactive GenePort™ demonstration.

INTEGRATED BIOINFORMATICS SOLUTIONS

GENEPORT™ AT A GLANCE

- Portal-driven data mining and management
- Seamless integration of heterogeneous data
- Integrated sequence, expression, and literature data management
- Exchanges data with INCOGEN's HDFR and VIBE systems

- Real-time analysis capabilities
- Web browser-based system administration
- XML-based data exchange
- Search Agents automatically watch for data of interest
